

Centavo — App Design

1. Project Vision & UI Philosophy

Centavo AI is a financial tracking web application designed for freelancers, small business owners, and individuals.

Because financial tools can quickly become overwhelming, our interface must be clean, modern, and uncluttered.

Design Inspiration: Think modern fintech apps (like Stripe Dashboard, Wise, or Mercury Bank).

- **Persistent Navigation:** A collapsible sidebar (desktop) or bottom/hamburger navigation (mobile) linking to:
 - Dashboard (Home)
 - Transactions
 - Budgets & Goals
 - Accounts
- **Header Bar:** Displays the active page title, current user profile badge, and the primary call-to-action button: "+ Quick Add".
- **Global Natural-Language Input Bar:** input text-field allowing users to type freeform text prompts to log transactions via AI (e.g., "Spent \$35 on gas with debit").

2. Screen Breakdown & Wireframe Requirements

These are just examples/ideas for a layout, it doesn't need to be like this.

Screen 1: The Main Dashboard

The dashboard provides a high-level executive summary of current finances:

- Account Balance Cards: 4 distinct summary cards displaying the current balance for Checking, Savings, Credit Card, and Cash.
- Quick AI Ingestion Bar: Centered input field with a submit button and example prompt placeholders.
- Recent Activity Feed: A compact table or card list showing the 5–7 most recent transactions (date, description, category, amount, and source badge: Manual vs. AI).
- Budget Snapshot: Mini progress meters showing spending vs. monthly limit for top categories (e.g., Groceries: \$420 / \$500).

Screen 2: Transactions Page (The Central Ledger)

The detailed log where users search, review, and manually manage entries:

- **Filter & Search Controls:** Date range picker, category dropdown filter, account selector, and search bar.
- **Transaction Table Columns:**
 - Date
 - Note / Description
 - Account (e.g., Chase Checking)
 - Category badge
 - Amount (styled clearly: Green for Income, Red/Neutral for Expense)
 - Entry Source indicator (manual vs ai_text)
 - Actions (Edit / Delete icon buttons)

- **Manual Add Transaction Modal:** A clean form popup containing:
 - Type selector: Expense, Income, Transfer
 - Amount input (\$0.00)
 - Source account & Destination account (if transfer selected)
 - Category dropdown
 - Date picker and optional note field

Screen 3: Budgets & Savings Goals

- **Monthly Budgets Section:**
 - List of budget cards by category (e.g., Dining, Groceries, Rent).
 - Visual progress bar for each: percentage spent, remaining balance, and an alert state if spending exceeds 100% of the limit.
 - "+ Set Category Budget" action button.
- **Savings Goals Section:**
 - Cards showing goal name (e.g., "Emergency Fund"), target amount, current amount saved, target date, and a radial or linear progress meter.
